Building Your Accounting Database in Microsoft Access

Once planning is complete, you can proceed to actual database creation. This process involves creating tables, establishing relationships, designing forms for data entry, creating queries for reporting, and designing reports for summaries.

1. Creating Tables

Tables form the backbone of your database, storing all relevant data.

Steps:

- Open Microsoft Access and select ?Blank Database.?
- Name your database (e.g., ?AccountingDB.accdb?) and click ?Create.?
- Use the ?Create? tab to select ?Table Design.?
- Define each table based on your data model:
- Assign primary keys (Unique identifiers like CustomerID, InvoiceID).
- Specify data types (Short Text, Number, Date/Time, Currency, Yes/No).
- Set validation rules and input masks where necessary.
- Save each table with a descriptive name (e.g., ?Customers,? ?Invoices,? ?Transactions?).

Tip: Use Lookup Wizard to create drop-down lists for fields such as Account Types or Customer Names to enhance data consistency.

2. Establishing Relationships

Relationships enforce referential integrity, preventing orphaned records and ensuring data consistency.

Process:

- Go to the ?Database Tools? tab and click ?Relationships.?
- Add the relevant tables.
- Drag primary key fields to their associated foreign key fields:
- For example, drag CustomerID from Customers to CustomerID in Invoices.
- Define the relationship type:
- One-to-many (e.g., one customer to many invoices).
- Enforce referential integrity and cascade updates/deletes as appropriate.

3. Creating Data Entry Forms

Forms simplify data entry, especially for users unfamiliar with database tables.

How to Create Forms:

- Select the table or query you want to base the form on.
